Geospatial Data

The Tres Rios Field Office uses an Enterprise GIS to manage its geospatial data. This includes using ESRI's ArcGIS family of products to manage the data, perform analysis, and develop maps and data. The following compressed zip file(s) contain ArcGIS Shapefiles and PDF maps depicting spatial information of various data including range land data. Please refer to the Metadata of the individual Shapefiles for more detailed information about the data and use constraints.

Disclaimer

These data files are provided by the Bureau of Land Management (BLM) as is and may contain errors or omissions. The user assumes the entire risk associated with the use of these data and bears all responsibility in determining whether these data are fit for the user's intended use.

The information contained in these data is dynamic and may change over time. The data are not better than the original sources from which they were derived, and both scale and accuracy may vary across the data set. These data may not have the accuracy, resolution, completeness, timeliness, or other characteristics appropriate for applications that potential users of the data may contemplate. The user is encouraged to carefully consider the content of the metadata file associated with these data. These data are neither legal documents nor land surveys, and must not be used as such. Official records may be referenced at most BLM offices. Please report any errors in the data to the BLM office for which it was obtained.

The BLM should be cited as the data source in any products derived from these data. Any users wishing to modify the data should describe the types of modifications they have performed. The user should not misrepresent the data, nor imply that changes made were approved or endorsed by the BLM. This information may be updated without notification.
